

Overview on EuroWindoor's activities

1. New Studies show no alternatives to propiconazole - CEI-Bois, EuroWindoor and SBS call for a renewal of the approval of propiconazole for use in wood preservatives for timber windows and doors
2. Meeting between the European Window Stakeholders and representative of the European Commission
3. Active House 10-year anniversary – a fruitful partnership with EuroWindoor
4. EuroWindoor feedback on the proposal to recast the Energy Efficiency Directive
5. EuroWindoor wishes Happy Holidays and looks back on an eventful year
6. Appointments 2022

New Studies show no alternatives to propiconazole - CEI-Bois, EuroWindoor and SBS call for a renewal of the approval of propiconazole for use in wood preservatives for timber windows and doors

Brussels, 1 September 2021 – CEI-Bois, EuroWindoor and Small Business Standards (SBS) published an updated position paper including results of new studies scrutinizing for possible alternatives for propiconazole in wood preservatives for timber windows and doors. The studies show no suitable biocidal alternatives for propiconazole for sustainable wood-based products in construction. Therefore, the three associations call for a renewal of the approval of propiconazole and extend their invitation for a public-private partnership to develop long term sustainable alternatives.

Active House 10-year anniversary – a fruitful partnership with EuroWindow

activehouse

Frankfurt, 21. October 2021- Comfort, energy and environment – those are the elements of the holistic approach the members of the Active House Alliance are striving for when designing buildings. This strategy was and still is revolutionary and slowly becomes a standard in many countries around the world. EuroWindow is glad to be a supporter of this vision for many years and helps to implement these elements during the political decision-making process.

EuroWindowor feedback on the proposal to recast the Energy Efficiency Directive

Brussels, 19 November 2021 – EuroWindowor answered the public consultation of the European Commission on the proposal to recast the Energy Efficiency Directive (EED). The revision is needed to achieve the climate goals by 2030 and 2050 as the building sector is responsible for around 40% of energy consumption and 36% of the greenhouse gas emissions. Therefore, it is one of the most important points to decarbonize the building stock.

EuroWindowor wishes Happy Holidays and looks back on an eventful year

As 2021 comes to an end EuroWindowor looks back on a dynamic year which proved to be very work loaded despite the ongoing Covid-situation. Nevertheless, we are happy about the successes that we have been able to record and that the importance of windows for energy efficiency and climate protection has moved more into focus.
